

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	Gurramkonda Harshitha	Reg. No.:	192324250
Section / Batch:	2023	Date:	14-07-2026

Code of Conduct

I Gurramkonda Harshitha (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: G.Harshitha

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary Expansion	Word Generation, Semantic Transformation	TP-09
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10

Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12
Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	Technical Content Accuracy	Problem Identification	Use of Tools	Communication	Professionalism	Total %
2	30	25	15	12	7	89%

Basic Regular Expression Patterns

COURSE: NATURAL LANGUAGE PROCESSING

COURSE CODE: DSA0308

GUIDED BY:

Dr. KUMARAGURUBARAN. T

PRESENTED BY

G. Harshitha(192324250)

Abstract

- Introduce the concept of Regular Expressions (Regex).
- Explain the importance of Regex in Natural Language Processing (NLP).
- Describe how Regex is used to search, match, validate, and extract text.
- Discuss the basic Regex symbols such as ., *, +, ?, ^, \$, [], and \d.
- Explain character classes and quantifiers used in pattern matching.
- Demonstrate common Regex patterns for emails, mobile numbers, passwords, dates, and URLs.
- Explain the role of Regex in text preprocessing, including cleaning and tokenization.

INTRODUCTION

- Natural Language Processing (NLP) is a branch of Artificial Intelligence (AI) that enables computers to understand, process, and generate human language.
- Before text data can be analyzed, it often needs to be cleaned and organized.
- One of the most effective tools for this task is Regular Expressions (Regex).
- A Regular Expression is a sequence of characters that defines a search pattern.
- It is used to search, match, validate, and extract specific patterns from text.
- Regular expressions help identify information such as email addresses, phone numbers, dates, URLs, passwords, and other structured data within large amounts of text.

WORKING COMPONENTS AND APPLICATIONS

Working Components:

- **Input Text** – Receive the text or document.
- **Regex Pattern** – Define a search pattern using regex symbols.
- **Pattern Matching** – Compare the pattern with the input text.
- **Validation/Extraction** – Validate or extract the required information.
- **Output** – Display the matched or extracted result.

Applications:

- Email validation
- Mobile number validation
- Password validation
- Data cleaning Text preprocessing
- Information extraction
- Search and replace Tokenization Spam detection Form validation

Flow diagram

1. **Input Text** – The system receives raw text such as emails, phone numbers, or documents.
2. **Define Regex Pattern** – A suitable regular expression pattern is created.
3. **Pattern Matching** – The regex engine compares the pattern with the input text.
4. **Pattern Found?** – The system checks whether the text matches the pattern.
5. **Extract/Validate Data** – If a match is found, the required information is extracted or validated.
6. **Output** – The final result is displayed. If no match is found, a "No Match" message is shown.

ADVANTAGES AND DISADVANTAGES

Advantages:

- Fast Pattern Matching – Quickly searches and matches text patterns.
- Easy Data Validation – Validates emails, phone numbers, passwords, and dates.
- Efficient Text Extraction – Extracts useful information from large text datasets.
- Improves Text Preprocessing – Helps clean and organize text before NLP analysis.
- Reduces Manual Effort – Automates repetitive text processing tasks.

Disadvantages:

- Complex Syntax – Difficult to write and understand for complex patterns.
- Limited Context Understanding – Matches patterns but does not understand the meaning of text.
- Hard to Maintain – Long regex patterns can be difficult to debug and update.
- Language Limitations – May not work well with highly complex or multilingual text.
- Performance Issues – Very complex regex patterns can slow down processing on large datasets.

CONCLUSION

- Regular Expression Patterns are an essential tool in **Natural Language Processing (NLP)** for searching, matching, validating, and extracting information from text.
- They simplify text preprocessing tasks by identifying patterns such as emails, phone numbers, dates, passwords, and URLs.
- Regular expressions improve the speed and accuracy of text processing while reducing manual effort.
- Although they cannot understand the meaning or context of language, they remain an efficient and widely used technique for handling structured text data.
- Therefore, Basic Regular Expression Patterns play a vital role in many real-world NLP applications, including chatbots, search engines, spam filtering, and data extraction.

THANK YOU !
